

Price Page Desktop

Width: use bootstrap container (not fluid)

Requirements:

1. Make wireframe for each page

2. Bootstrap navigation bar with links.

3. Add fancy pictures (not priority)

4. Maybe media (sound/video?)

5. Add a bootstrap carousel.

6. Apply conditional styling for responsive control (breakpoints relating to screen width)

7. Use HTML, CSS and Bootstrap

8. Validate all files with an online validator

Additional requirements for price page:

1. Show services and prices

2. Attract new customers

3. Easy to find info and with a well-balanced color-scheme

General technical notes:

• Font size should relative to screen size!

• Picture will be adjusted in their width. The height should be set to auto-adjust.

Fun details:

• A jingle that is played when the page loads.

• A mute button, that is on by default. (Press to hear music)
