Frontpage Mobile
Width smaller than 720px: Container = 100%
Width smaller than 540px: Absolute width with 300px

Requirements:
1. Make wireframe for each page
2. Bootstrap navigation bar with links.
3. Add fansy pictures (not priority)
4. Maybe media (sound/video?)
5. Add a bootstrap carousal.
6. Apply conditional styling for responsive control (breakpoints relating to screen width)
7. Use HTML, CSS and Bootstrap
8. Validate all files with an online validator

Additional requirements for frontpage:
1. Promote bussiness
2. Attract new customers
3. Show prices for the project types?
4. Easy to find info and with a well-balanced color-scheme

General technical notes:
- Font size should relative to screen size!
- Picture will be adjusted in their width. The height should be set to auto-adjust.

Fun details:
- A jingle that is played when the page loads.
- A mute button, that is on by default. (Press to hear music)
